
Energy Management Policy

HGF Rīga is one of the largest and most progressive manufacturing companies in Latvia, specialising in the manufacture of rubber and polymer products. As a company that intensively consumes energy resources, we recognise how important it is to continuously improve energy efficiency and optimise energy consumption costs. We, therefore, resolve to:

- reduce energy consumption in our operations by setting appropriate goals
- continuously assess and improve the efficiency of our energy management system
- efficiently utilise internal and external resources and information to reach the set goals
- strictly abide by legal and other requirements regarding the use, efficiency and consumption of energy resources
- take energy efficiency into account when implementing development, reconstruction or improvement projects of our facilities, equipment, systems and processes
- promote energy efficiency as a significant factor in purchasing process decisions
- encourage employees to follow energy efficiency improvement measures both at and outside work
- monitor and analyse the energy efficiency performance of HGF Rīga

All employees and cooperation partners are informed of the Energy Management Policy, which is available to all interested parties on the company's website www.hgf-group.com.

The Energy Management Policy may be reviewed to reflect changes in the branch or scope of activity, strategic priorities and the set goals.
